

FIKIRU DEMLEW

Full-Stack Developer · Frontend Specialist · ML Engineer

+251974155283 · fikrudemlew@gmail.com · fikrudemlew.vercel.app · github.com/FikruDemlew · [LinkedIn](#) · Addis Ababa, Ethiopia

PROFILE

Graduated Mechatronics Engineer and self-driven full-stack developer with proven experience delivering production-ready web applications for private clients remotely. Comfortable across the full stack — from building responsive React and Vue frontends to architecting REST and GraphQL backends with Django, Go, and Hasura. Has shipped complex platforms including a freelance marketplace with real-time chat, a recipe sharing site, and an e-commerce app with payment integration. Complements engineering skills with applied machine learning using CNN transfer learning, OneFormer, and SAM. Led frontend teams under GDSC and thrives in collaborative, fast-moving environments.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), Python, Go, C++
Frontend	React, Next.js, Vue 3, HTML5, CSS3, Tailwind CSS
Backend / API	Django REST Framework, Node.js, Go (Gin), Hasura (GraphQL), REST, Swagger / OpenAPI
Databases	PostgreSQL, Firebase / Firestore
Real-time	WebSockets, Django Channels (chat & notifications)
DevOps & Tools	Docker, Postman, Git, GitHub, Netlify, Vercel
Machine Learning	TensorFlow, Keras, CNN, MobileNetV2, OneFormer, SAM-3, Transfer Learning
Payments	Third-party payment gateway integration
Soft Skills	Team leadership, Remote collaboration, Communication, Adaptability

WORK EXPERIENCE

Freelance Full-Stack Developer · [Private Clients \(Remote\)](#) 2025 – Present

- Delivered multiple full-stack web applications for private clients on a remote, contract basis.
- Handled end-to-end scope: requirement gathering, UI/UX design, development, testing, and deployment.
- Worked independently across varying tech stacks, adapting to each client's requirements and timeline.

PROJECTS

Freelance Marketplace Platform · [Full-Stack Project](#) 2025

- Built a full-stack platform connecting clients who post jobs with freelancers who browse, apply, and manage their work — all in one place.
- Clients can create jobs with category, budget, deadline, and status fields; freelancers can submit and edit applications with a streamlined proposal flow.
- Implemented real-time chat using Django Channels so clients and freelancers can communicate directly within the platform without leaving the page.

- Designed a notification system that alerts users about new applications, incoming messages, and project status updates in real time.
- Secured all API routes with token-based authentication and enforced a role-based access system separating client and freelancer permissions.
- [Live at freelance-marketplace-tau.vercel.app](https://freelance-marketplace-tau.vercel.app)

Stack: *React.js · Django REST Framework · Django Channels · PostgreSQL · Axios · Token Auth · Vercel*

YouTube Clone · [Personal Project](#)

2024

- Engineered a fully functional YouTube clone with video browsing, category filtering, and search — consuming the YouTube Data API v3.
- Replicated YouTube's layout with a responsive, pixel-accurate UI built entirely in React, handling dynamic data fetching, loading states, and error boundaries.
- Architected clean component separation: sidebar navigation, video cards, search bar, and video detail pages each as isolated, reusable modules.
- [Deployed on Netlify with continuous deployment from GitHub — live at youtubeclone1994.netlify.app](https://youtubeclone1994.netlify.app)

Stack: *React · Tailwind CSS · YouTube Data API v3 · Netlify*

Full-Stack Food Recipe Sharing Platform · [Personal Project](#)

2024–2025

- Designed and built a full-stack recipe sharing site where users can create, browse, search, and share recipes with rich media support.
- Architected a Go backend exposing a Hasura GraphQL layer over PostgreSQL for flexible, real-time data querying and mutations.
- Containerised the entire stack with Docker for reproducible local development and deployment; documented all endpoints with Swagger and validated them in Postman.
- Delivered a responsive Vue 3 frontend styled with Tailwind CSS, with component-driven architecture and reactive state management.

Stack: *Vue 3 · Tailwind CSS · Go · Hasura (GraphQL) · PostgreSQL · Docker · Swagger · Postman*

E-Commerce Application with Payment Integration · [Personal Project](#)

2025

- Developed a full-featured e-commerce app covering product listings, cart management, order flow, and secure checkout with live payment processing.
- Integrated a third-party payment gateway — handling the full transaction lifecycle including initiation, success/failure callbacks, and order confirmation.
- Built a PostgreSQL-backed REST API managing products, users, and orders; secured endpoints with JWT-based authentication.

Stack: *React · Node.js · PostgreSQL · REST API · Payment Gateway · JWT*

Delivery App — Frontend · [Google Developer Student Clubs \(GDSC\)](#)

2023

- Collaborated in a 9-member cross-functional team to build a production-ready, mobile-optimised delivery app frontend.
- Owned core UI components including order tracking, product catalogue, and checkout flow; ensured consistent UX across breakpoints.
- Integrated frontend with a Go REST API, handling async data fetching, loading states, and error handling across all views.
- Contributed to team code reviews and maintained shared component library standards across the codebase.

Stack: *React · Tailwind CSS · JavaScript · PostgreSQL · Go*

AI Tile Visualizer — Semantic Segmentation · [ML Project](#)

2025

- Built an AI pipeline that segments room surfaces (walls, floors, ceilings) in photos and realistically composites new tile textures onto them.
- Used OneFormer for panoptic/semantic segmentation to accurately identify and classify surface regions across diverse room layouts.
- Integrated SAM-3 for precise, user-guided mask refinement on complex surface boundaries where automatic segmentation needed correction.

Stack: *Python · OneFormer · SAM-3 · TensorFlow / Keras · OpenCV · Pillow*

Tomato Quality Sorting AI — CNN + Transfer Learning · [ML Project](#)

2024

- Trained a CNN classifier using MobileNetV2 transfer learning to automatically grade tomatoes by quality class from images.
- Applied fine-tuning and data augmentation on a custom tomato dataset, significantly improving classification accuracy over a baseline model.

Stack: *Python · TensorFlow · Keras · MobileNetV2 · CNN · Transfer Learning*

Movie Watchlist Platform — Team Leader (5 members) · [Google Developer Student Clubs \(GDSC\)](#)

2022–2023

- Led a 5-member team to build a movie aggregation platform with global trending data, real-time search, and a personalised watchlist.
- Managed full project workflow — planning, task delegation, code reviews, and deployment — as team lead.

Stack: *HTML · CSS · JavaScript · React · Firebase*

EDUCATION

B.Sc. Mechatronics Engineering · [Addis Ababa Science and Technology University \(AASTU\)](#)*2021 – 2026*

- Multidisciplinary programme covering control systems, embedded systems, robotics, and software engineering.
- Active GDSC member — Frontend Developer & Team Leader.

Programming Fundamentals Nanodegree — Udacity

Verified Certificate · Python, problem-solving, and algorithmic thinking.

Machine Learning Course

Supervised learning, CNNs, and transfer learning — applied in tomato-sorting and tile-visualizer projects.
